Xfiber Internet

Xfiber Internet is a high-performance Internet service specially adapted for businesses. The service can be delivered with capacity from 10Mbps to 10Gbps.

The internet service is preferably delivered on fibre, but can also be delivered on other available technologies (such as wireless connections). Xfiber can offer flexible solutions adapted to the needs of each individual company.

Xfiber Internet can be delivered with a set of additional services such as several IP addresses and/or MAC addresses (see list of additional services for a full overview)

Xfiber has built up its own extensive and redundant core network, with a focus on high performance and the lowest possible latency/delay. Xfiber's network is also connected to a large number of other operators' access networks. This enables us to deliver market-leading services with extreme performance and high uptime for the corporate market.

• Internet access
• Robust core network
• Free support with no waiting time
• Guaranteed uptime (SLA) 99.8%
• Official IP address included
• Access to a highly certified consulting team
• Route the operation of Xfiber
• 24-hour monitoring of lines and routes
